DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to rub-rail/bumper structure, classified in class 267, subclass 139.
 - II. Claims 18-20, drawn to method for making a composition containing a phosphorescent material, classified in class 264, subclass 21.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, Invention I presents a rub-rail/bumper structure not having a light source, while Invention II presents a process of making a glow-in-the-dark material (i.e. phosphorescent material). The inventions are different not only because they define unrelated structures with different functions and modes of operation, but also because the process of Invention II could not be used to make the apparatus of Invention 1. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
3. Because these inventions are distinct for the reasons given above and the search required for Group I am not required for Group II, and vice versa, restriction for examination purposes as indicated is proper.
